

SC2001

ALGORITHM DESIGN AND ANALYSIS

Lab Projects

1. Lab sessions start in Week 6 or 7, depending on your lab group.
2. Students in each lab group will be allocated into teams, each of 3 – 4 members. The team allocation will be done by the lab TA and released to the students at the lab group site in NTULearn. Do not form your own teams!
3. Students in the same team should work together to complete the projects. In general, all members of the same team will be given the same grade for each project. The lab TA may award a higher grade to a student with outstanding performance. The lab TA may award a lower grade to a student with very little contribution to the group (such as, not actively participating in the project).
4. If a student is absent from a lab session, please send your MC/LOA to the lab staff and your Lab TA. Your teammates will have to present on behalf of the absentee.
5. It is compulsory for students to attend their project presentations. If a student is absent from the presentation without a valid justification (e.g., MC), he/she will receive zero mark for that project. If a student is on MC for both Lab 1 and Lab 2, he/she will have to make an appointment with the Lab TA to answer questions about Lab 1 and Lab 2 in order to get the marks for these 2 labs.
6. Before each lab class, each team should have finished the practical work e.g. coding and testing of programs. You may do coding in any programming languages, e.g., Python, Java, C++, C, etc. on your own computers. Your code must be written in a way that somebody not familiar with your chosen language is able to follow it.
7. Each team has 10 minutes for presentation including presenting algorithms, demonstrations, and 2 minutes of Q&A. Students should fully utilise the given 10 minutes to let your lab TA understand your work. No additional time will be given to any team. Each team member is required to be familiar with the whole project as the lab TA may choose any one of you to answer some questions in Q&A. It will be considered as a part of the assessment under presentation.
8. No submission is required for lab projects 1 & 2. Submit your presentation slides of Project 3 to your lab group course site by end of the day of your Quiz 2.

9. Each project will be assessed the following components and each component's grading percentage is given below:

Components	Percentage
Correctness: Algorithm, Implementation	40%
Analysis: Theoretically and Empirically	40%
Presentation, Clarity of Slides	20%
